

JavaScript Short Notes

1. Basics

JS is a scripting language used for web development.

Variables: var, let, const (prefer let/const).

Data Types: Number, String, Boolean, Object, Array, Null, Undefined.

2. Functions

Reusable blocks of code.

Arrow functions: `const fn = () => {}`

3. Arrays

Store multiple values. Methods: `push()`, `pop()`, `map()`, `filter()`.

4. Objects

Key-value pairs. Access using dot or bracket notation.

5. DOM

Document Object Model used to manipulate HTML.

`document.getElementById()`, `querySelector()`

6. Events

User interactions like click, submit, keypress.

`addEventListener()` is commonly used.

7. Promises & Async

Handle asynchronous operations.

Promise, `async/await`, `fetch` API.

8. ES6 Features

let/const, arrow functions, destructuring, spread/rest.

9. Error Handling

try...catch used to handle errors.
